Re: ModFit LT 4.0.5 PDF documents fail to open or are missing dots in the dot plots.

Question : Sometimes my PDF exports fail to open or are missing dots in the dot plots?

Answer : This is a known issue with some PDF readers.

Cause

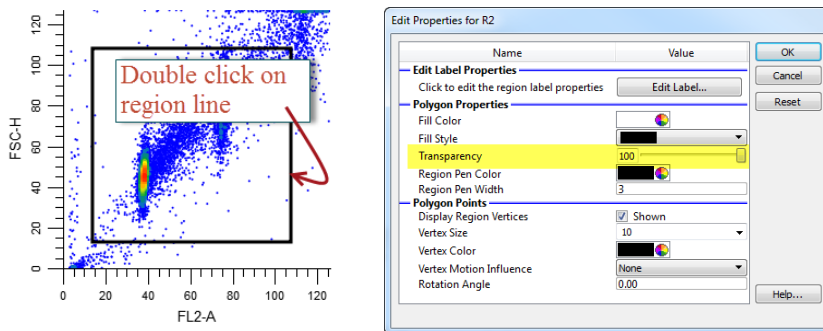

ModFit LT version 4.0.5 dot plot gate regions have a transparency option that is not compatible with some PDF readers.

Solution

Change the transparency value to 100% for all gate regions.

Details

Open and set up your analysis as usual in ModFit LT. For each gate used, double click the gate region line to bring up the Edit Properties for that region. Change the "Transparency value to 100%. Click OK to close the dialog.

If you wish you may save this document as a Master Analysis Template containing these settings using the Save As option under the File menu. The next time you start ModFit LT, you can use the Open Report option to open your saved template.

We are working on a solution that will be supported by all PDF readers.
